Rar File name File size Downloaded Debian Unstable untitled 4.32 MB 0 Src Description file It is usually located in the top-level directory of the unpacked archive. Entries for package are listed in debian/control and debian/changelog. Source code The source code for the package is retrieved from the Debian package's source package or via apt source, which downloads it from a URL for the current distribution Packages from Debian stable repositories The code is derived from the Debian package in stable from upstream Packages from Debian testing repositories The package is newer than its Debian stable version and will not upgrade to the stable version Packages from Debian unstable repositories There is a newer version of the package available from upstream. The Debian package will probably be upgraded to that version as soon as it becomes stable. Packages from Debian experimental repositories The package is newer than its Debian unstable version and will not upgrade to the unstable version Packages that are unbuildable This field is used to describe packages that are unbuildable. Unbuildable packages are not included in the lists of packages below, because the package could be built from source if it were possible. Packages that are external The package has a dependency on an external package to build the binary package. These are not included in the lists below because that information is not available. Other files Other files provided by the source package, either as data files or control files. Cells Each cell holds the following information: Links The following sections link to pages that contain more information about specific parts of the build process. Disease-specific quality of life in juvenile myositis: a comparative evaluation of different instruments. In juvenile myositis (JM) specific health-related quality of life (HRQOL) instruments are frequently used but no valid comparative data for different instruments exist. To compare HRQOL in a group of patients with JM assessed by an established JM-specific HRQOL scale (JM-AIMS2) with HRQOL in a group of patients with Juvenile Dermatomyositis (JD) or a group of healthy controls using generic HRQOL scales. 84 patients (JM 60%, f678ea9f9e
